

ACS Safe

Cannabis Employee Safety and Compliance

"Protect your most valuable asset, your employees."

Safe Open/Close

The employee(s) charged with opening or closing your cannabis establishment simply begins a countdown using the app, completes the pre-set required SOPs, and ends the timer once it has been deemed safe.

Active Shooter Button

ACS Safe provides every employee the ability to send out an alert. With the press of a button, all employees at the location that day will get a message that could potentially save their lives.

SOP Documentation

Use the ACS to log the completion of daily procedures, enabling you to effectively identify discrepancies in data and determine how to work more efficiently, ultimately saving you time and money.

Two-way Mass Messaging

Send alerts to employees based on location, department, or individual selection. All responses are logged in the cloud. Works great in emergency Situations.

Access Cloud Data

All data is stored in the cloud, enabling instant access to detailed information from up to seven years before; to meet your compliance and auditing needs.
