

# ACS SAFE

PEOPLE PROTECTION. RISK REDUCTION. PEACE OF MIND.

ACS Safe is engineered to increase employee safety while reducing costs, mitigating risk and equipping you with an array of features to improve your daily operations and prioritize what's most important: **protecting people on the job.**

## SECURE OPEN & CLOSE

The ACS Safe app empowers your employees to confidently open and close alone by providing an innovative safety countdown that alerts predetermined personnel if the employee fails to complete the opening or closing procedure and stop the countdown before it ends.

REDUCE RISK

ACCESS DATA

## CLOUD-BASED SYSTEM

All data is stored in the cloud, enabling instant access to detailed information from up to seven years prior to meet your compliance and auditing needs. The safety countdown runs in the cloud, so ACS Safe will still be alerted if an employee's phone is powered off, dead, lost or destroyed. ACS Safe requires no hardware, and installation, administration and training are completed remotely.

## SOP DOCUMENTATION

ACS Safe can be used to log the completion of daily procedures, enabling you to easily identify discrepancies in data and determine how to work more efficiently, ultimately saving you time and money. In addition, ACS gives employees peace of mind at the workplace, which could increase employee retention, and the safety countdown enables employees to open and close alone, reducing labor costs.

CUT COSTS

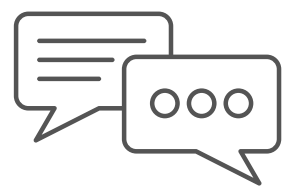

HOLD EMPLOYEES  
ACCOUNTABLE

## EMPLOYEE ACTION LOG

Recording daily procedures, such as arming the alarm system and locking the safe, not only helps cut costs, but holds your employees accountable for doing the job correctly and completely. ACS Safe can also help ensure compliance with the CDC's COVID-19 recommendations by having employees certify their ability to safely come in each day.

## EMERGENCY MANAGEMENT & TWO-WAY MESSAGING

Send alerts to employees based on location, department, or by individual selection. Two-way messaging allows administrators to interact with employees in real-time, tracking who is safe and sending help to those who need it.

COMMUNICATE  
EFFECTIVELY

REACT INSTANTLY

## ACTIVE SHOOTER ALERTS

When it comes to an active shooter situation, every second counts, which is why ACS Safe provides every employee the ability to send out an alert. With the press of a button, all employees at the location that day will get a message that could potentially save their lives.

**PROTECTING YOUR EMPLOYEES: IT'S WHAT WE DO.**
